Lecture 12

Cornell Notes	Topic: Anatomy of an html tag	Course
		Class
		Date

Essential Question:

- What is an HTML tags
- How does an HTML tag work?

Questions/Cues:

- Exactly the same as marking down a manuscript
- The publisher happens to be the browser

Notes

- HTML tags have a start tag and an end tag with content in between (<h1> words </h1>)
- The tags that don't need a closing tags are called self-closing tags (
, <hr>)
- Looking at the documentation can help with figuring out the type of tag
- hr tag would help us add a line (self closing)
- HTML attribute gives you more information about the HTML element
- Example: <hr size = "3"> , here size = "3" is the attribute
-

Additional information:

- On chrome use inspect tools to see what html and css a website is using

Summary

- HTML elements can be self-closing.
- Attributes can be used to give more information to the elements
-
